Christian Zhaco

What do I want to learn or understand better?

This week I deep dived into the code to learn a bit more about the HTML part of it and trying to implement features in it. I chose to work on this task since I want to improve my HTML skills which I haven't really put to the test before. It took a bit of googling and searching to understand but it was kinda straight forward in some cases when it came to reading it and understanding the code.

I also helped on the KPIs to understand how they were formatted.
I looked at the database and revised that a bit as well.

A lot of this week was smaller tasks for me but in different fields so that I got an understanding of every part of the project.

It was fun and I feel like I have a better understanding of the complete project and I can help the rest of the group answer any questions about running code of different branches or how to read and understand some part of the code.

How can I help someone else, or the entire team, to learn something new?

As I said above, by diving into every single part of the project I now have more knowledge about it in full and also details about everything so I can help people run different branches, format or input data into KPIs and document code as well.

What is my contribution towards the team's use of Scrum?

As normal, I joined the stand up meetings, provided them with my data, updated trello, attended every meeting and so on.

What is my contribution towards the team's deliveries?

This week I helped bring value to the customer by researching color palettes and choosing a fitting one for the project. I changed the color of the website a bit and also added small changes to text boxes, sizing of items and so on to make it look cleaner.
