

Individual Reflection Week 8 - Linus

What do I want to learn or understand better?

This was our last sprint, and we actually did everything we wanted to achieve. I want to learn more about html coding and after seeing the other teams presentation, alot of them used React for their frontend. So I want to look into that a bit as well. But right now, it feels like me and the team have a really good understanding of Scrum. I just hope that I will work with it again in the future, with a real PO and not having to simulate it.

How can I help someone else, or the entire team, to learn something new?

Last sprint, before our presentation we all did some code review and looked through everything together. Since I have written a lot of our code, I was explaining exactly what was going on and why I used the different methods. So now everyone understands what is going on and how it works.

What is my contribution towards the team's use of Scrum?

This week I was neither PO or Scrum Master, but since it was a short weird sprint anyway it didn't really feel like a sprint. We treated the presentation and preparation as tasks for this sprint. So we all worked more closely together this sprint, which worked really well. But the sprint review meeting was really short, and we mostly spent time talking about how and when we were going to do all the administrative work to finalize the repo and final report.

What is my contribution towards the team's deliveries?

During the presentation I was in charge of answering the questions. The presentation was a success in my eyes, loads of positive questions and a lot of interest from the crowd. So that was very nice.

Regarding the usual weekly reflection and sprint review we all participated like usual. Everyone said what was on their mind, but it was not a particularly useful review this sprint. Since we were all so focused on planning for how we were gonna write the final report and finalize the repo. So that took up the majority of our meeting.

But we have a good plan laid out and its gonna work out great.
