What do I want to learn or understand better?

This week I worked on researching the way we were going to implement our search function since we talked about implementing it at the beginning of the week but came to the conclusion that we had too many questions that we couldn't answer so we did not want to start coding before we knew what we were getting ourselves into. Since I just focused on this part, I didn't really look into the code that much and don't really understand every new implementation fully but after our meeting at the end of the sprint I got a better understanding of it and I'm going to put the weekend into looking into it more and testing it out so I know what every part of the project does.

How can I help someone else, or the entire team, to learn something new?

With my research, I wanted to summarize it in a way so that everyone could understand my conclusion. I presented a couple of different alternatives, with the way to implement them and a live example of them to show to the team.

I also wrote about the different ways to go about doing this and the pros and cons of them.

What is my contribution towards the team's use of Scrum?

I participated in the daily stand-up meetings, I updated my part of Trello when I did something major to a task. I recorded my hours spent for the KPI's. Those were the daily operations and then we of course have the meetings we all attended with the planning and reflections.

What is my contribution towards the team's deliveries?

This week I didn't really produce much value to the PO's but I did however produce value to the developers since the research paper I wrote this week will help us in the next sprint to easily choose a method of implementing one of our key functions.
