

Individual Reflection W.38

Group Dagobah
Christian Zhaco

The flow we had this week was really good. I appreciated that we took some extra time to define the tasks and clear up our scrum board. The feedback from the TA's really helped us prioritize the right thing.

I felt that with the clear Scrum Board, you got a pretty good overview of what everyone was working on, how far we have gotten in the project and what we need to prioritize in the future. Before this, it was just a clusterfuck of tasks that we were doing, tasks we were going to do this sprint, next spring, sometime if we had time over and just stuff all over the place.

The team worked together on some parts this week and the members that cooperated seemed to have managed just fine, I did my part on my own so I can't say too much about that but I think that next week will be more focused on integration of tasks than adding new features which will require us all to work together.

Every week I grow my knowledge of Django, Python and HTML. It's still not perfectly clear to me but I try to learn a bit every week so I can understand how every part of the machinery works in order to then connect the parts to create the final product.

I try to set a goal to understand every line of code so that when we have our end-of-sprint meetings, i can explain all of the code to the group and not just what it does but why i chose to include it.

This week I was a PO. Me and the other PO talked a bit of what we wanted to prioritize and decided on creating a blank webpage and to request a demo prototype of the page layout. We all felt that this was the natural next step of the project so everyone agreed to it, not really much to say there. We all communicate and know where we have each other.

I worked on the back end this week as well. I deepened my knowledge in python/django a bit and then created a blank page on the website that just showed a simple text formatted in HTML. I also set it up so that we're able to create different subsites of the page if we want to.

The team is working great together. No hiccups so far and I think this project will work out flawlessly(without jinxing it now).
