

# Individual Reflection W.42

Group Dagobah  
Christian Zhaco

## **What do I want to learn or understand better?**

This last sprint I worked a bit more on the HTML, which was a lot of fun since its new to me for this project. Ive never worked with HTML or websites before but its always something I have wanted to learn so this was a perfect opportunity for me to do so.

I did some testing and googling and some more testing, it was fun and I want to keep on practising my HTML skills in the future.

I looked a bit at the documentation of hte code since I know that not one of my strengths, I looked how the other team members had implemented it and tried to think of how i would have done and what the difference would be.

I want to keep on working on my HTML skills and gain more experience in documentation of code.

## **How can I help someone else, or the entire team, to learn something new?**

I feel fairly confident in github and i know that osme members dont feel the same so i've been trying to be available for them now in the last sprint when we're signing everything off and merging everything so we know what to keep or not. i helped by explaining some parts of github merging and why it works as it does and how to think when using github or git as a tool.

## **What is my contribution towards the team's use of Scrum?**

As normal, I joined the stand up meetings, provided them with my data, updated trello, attended every meeting and so on.

## **What is my contribution towards the team's deliveries?**

I brought value to the team this week by looking into color schemes for the website and finding a suiting one. I also created a subsite with an "about us" page which i designed and another team member who i worked with wrote the text and we worked together trying to implement it in a clean way.
