What do I want to learn or understand better?

I've always had a bit of a problem working with git and all the commands of it so I've used my team members in different projects to help me upload stuff and merge branches but this week I took it upon myself to merge all the branches and make sure all the features were implemented in to the main branch.

I was a bit worried about this task and it took some testing and trying out different stuff but now I am a git master hehe.

I want to look into the code a bit more next week, both the python part and the HTML because I'm a bit lost when it comes to HTML so I want to learn about it.

How can I help someone else, or the entire team, to learn something new?

I've worked on like 2-3 different branches implementing features and now merging them with the main, noone felt really comfortable doing this was the feeling I got last meeting. So hopefully now they can ask me and I can help with merging branches in the future.

What is my contribution towards the team's use of Scrum?

Attending meetings, updating stand up meetings, working on trello, merging features that are "done" on trello, not just mine but all features.

What is my contribution towards the team's deliveries?

I unified the application by adding all smaller features to the main branch so that it looked clean and that we could present it to our PO's.
