Reflection week seven

The seventh week we had one scheduled supervision session, two group meetings that we had scheduled ourselves and a lecture regarding the final report and presentation.

- What do I want to learn or understand better?

This week I worked on the code, where I together with Simon removed redundant or unused code and commented or simplified some methods and definitions. This was and maybe still something that I want to learn or understand better, the code base of ours. I'm not clueless of how our code works, it's just some parts where I don't follow what's happening. This has been much clearer for me this week although there still is some room left to learn more.

One general thing I've wanted to learn more about in this course would be to understand better HTML coding. We have worked some with it in our project but I would like to learn more HTML coding.

- How can I help someone else, or the entire team, to learn something new?

I've tried to explain some of the changes I've made in code so that my team also can understand the code better. During meetings I also try to answer as many of the questions raised as possible, not only for the team's understanding but also for my own understanding.

I feel like there isn't much new stuff for this second last sprint that can be learnt, at least from the project side of learning. There is always something that can be learned but it feels like most of the team are on the same page right now.

- What is my contribution towards the team's use of Scrum?

I've contributed as a fellow team member this week, so I had no PO or scrum master tasks. Other than that I've done the usual stuff like worked on the trello board, planning poker, KPIs and contributing during meetings.

- What is my contribution towards the team's deliveries?

This sprint week just like last went really well, we had no major issues. We did however overestimate one of the tasks during the week, hence the "lack" of work for the burndown chart but it wasn't any major issue.

My main task this week was to clean up the code, update the KPI's and also to contribute my point of view on the customer satisfaction KPI. So I didn't do much coding other than some small changes and deletions. There were some mistakes done with the burndown charts where the naming had been done incorrectly but was fixed on the sprint review.

I feel like these reflections get shorter and shorter by time but I think it might be the natural case since it's just the polishing left before the project is done.
